

Champagne Massage[®]
AIR-JET SYSTEM

5 precisely placed air channels delivering a full-body massage.

Air jets across the floor of the tub.

You will feel like you are floating on air while bathing in your Champagne Massage[®] bathtub by American Bath Factory. Air is forced through precisely placed air channels and comes out strategically placed air-jets, creating invigorating bubbles for a relaxing and therapeutic bath massage. Soak away the pressures of your day and feel completely renewed from your Champagne Massage[®] bath experience.

American Bath Factory's decades of dependability means just that and more with engineering innovation that defines the Champagne Massage air tub system. Most manufactures design their air tubs with the air channels surrounding the outside edge of the bottom of the tub. They place their air blower attached to the tub. We do not!!

- 1) You get a therapeutic effect.
- 2) No ncomfortable noise and vibration when you are using your tub.

Why are American Bath Factory Champagne Massage air tubs different? We engineer our air channels through out the center area of the bottom of the tub and up the back side, so you get the therapeutic effect you are purchasing an air tub for. We also have our air blower detached from the tub to eliminate vibration, reduce noise, make servicing easier, and allow for easy storage of the air blower when not in use. But there is more! We have added a water resistant wireless remote control that controls air bubble intensity and temperature for easy operation. Finally we give each and every Champagne massage air tub shell an industry leading limited lifetime warranty to assure you the peace of mind you have come to expect from American Bath Factory.

The New and Improved
Champagne Massage[®]
External Blower
